## Objectives and Investment Policy

**Objective:** The Fund seeks to achieve long-term capital appreciation, primarily through investment in shares in companies.

**Investment Policy:**

- The Fund will seek to achieve its objective by primarily buying shares and convertible securities of well-financed companies (meaning companies believed to be without significant liabilities in comparison to their liquid resources) at a discount to what the investment manager believes is their true value.
- The Fund also seeks to buy high ranking securities, such as preferred stocks and debt instruments (including bonds, debentures, notes, high yield and distressed securities) that the investment manager believes are undervalued.
- Up to 35% of the Fund’s net assets may be exposed to debt securities (government and/or corporate, fixed or floating bonds) which may be rated below investment grade.

## Risk and Reward Profile

The indicator above illustrates the position of this Fund on a standard risk/reward category scale.

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.

The risk and reward category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean investment is “risk free”.

This indicator is not a measure of the risk that you may lose the amount you have invested.

The Fund is in category 5 because of the high range and frequency of price movements of the underlying investments.

The indicator opposite does not adequately capture the following risks of investing in the Fund:

- The Fund may invest in smaller companies whose securities tend to be subject to more price differences and more difficult to convert to cash than those of larger companies.
- The value of bonds is likely to decrease if interest rates rise and vice versa and below investment grade securities expose the Fund to greater risk than investment grade securities.
- The Fund intends to find value in industries that the investment manager believes to be temporarily depressed. The prices of securities in these industries may tend to go down more than those of companies in other industries. Due to the Fund’s investment policy, the Fund may at times have a significant cash position which may impact on Fund performance in certain market conditions and may make it more difficult for the Fund to achieve its investment objective.
- The Fund may use derivatives to try to reduce the overall risk of its investments or reduce the cost of investing, although this may not be achieved.
- Adverse movements in exchange rates could result in a loss to the Fund.

A more detailed description of the risk factors applicable to the Fund is set out in the “RISK WARNINGS” section in the Fund’s prospectus and supplement.
