

Investment Objective & Investment Selection

The Fund aims to provide enhanced market exposure to any positive return in the US equity market, relative to the S&P 500 Total Return Index, whilst providing for a level of capital preservation against negative market returns in anything but the bleakest of market conditions.

The Fund is fully invested in UK Gilts to minimise bank credit exposure. To gain US market exposure, the Fund sells puts, triggered only at their maturity (typically six years), if the Index has breached a pre-defined downside barrier and uses the premia generated and the yield from the Gilts to buy a combination of S&P 500 linked calls & call spreads. The combination of investments is optimized in order to maximize the Fund's intrinsic value relative to the S&P 500 Total Return across all time horizons and market move scenarios, as well as ensuring that the short term sensitivity of the Fund to changes in the S&P 500 is approximately 100%. Profit taking is undertaken when the Fund can replace existing investments with new ones which enhance the Fund's intrinsic value relative to the S&P 500 Total Return Index without materially changing the inherent risk profile of the Fund.

Monthly Review

Despite the Trump administration's continuing failure to pass meaningful legislative changes that were promised prior to his election and escalating tensions with North Korea the US market just keeps on going. It again tested new highs in August which led to the Fund also hitting its highest NAV so far. Some are attributing the continuing buoyant US market to share buybacks that companies are choosing to make rather than investing their historically high profit margins in expansion.

Pleasingly for the Fund, it had outperformed the S&P Total Return Index by 2.2% since launch by the end of the month, so it is now delivering on its aim to outperform the index by 1% to 2% per annum over the medium to long term.

With its existing holdings the Fund remains on track to continue outperforming the S&P Total Return Index in most market conditions, and opportunities to switch into new investments offering better potential outperformance will continue to be monitored.

The tables above are snapshots of the projected performance of the Fund relative to the S&P Total Return Index and in absolute terms if the investments currently owned by the Fund are held to maturity. It also contains some scenario analysis which estimates the relative performance over time. Along with other calculations, these performance indicators are constantly monitored and analysed in order to best achieve the Fund's objectives. Whilst the intrinsic value numbers are based on the current holdings being held to maturity, the scenario analysis numbers are based on assumptions we have to make with regard to interest rates, volatility and other option pricing parameters and therefore the actual performance is unlikely to correspond exactly to the figures above.

Assuming a net dividend yield of 1.42% pa for the TR Index and inclusive of 65bps per annum TER across all scenarios.

This Scenario and Intrinsic Value analysis assumes the investments that currently make up the Fund are all held until maturity.

→ Intrinsic Value

The intrinsic value is the aggregate terminal value of the Fund after fees are taken, relative to the S&P 500 Total Return Index. This table shows that, for example, if an investor bought the investments within the Fund today and the S&P 500 PR Index did not move between now and when the investments mature, the Fund would outperform the S&P 500 TR Index by 4.05%.

→ Scenario Analysis

We are able to “stress” the structured investments to estimate their performance over certain time periods for given market movements. For example, the table below shows that we would expect the Fund to grow by 36.05% by the end of three years if the S&P PR Index were up 30%. There are a number of assumptions we have to make with regard to interest rates, volatility and other option pricing parameters to generate these numbers and therefore the actual performance is unlikely to exactly correspond to the figures below, but it is a useful gauge.

Note, Calculations do not consider credit spread movements of the issuers of the securities. The MTM of the securities and therefore the NAV of the Fund will decrease as credit spreads widen and vice versa if spreads narrow.

Investing involves risk. Prospective Investors should be aware that the value of the fund depends on the performance of its underlying assets, the value of which may rise and fall. The value of the new Shares/Units can therefore fluctuate and Investors may not get back the amount they invest. In addition, there is no certainty that the market price of the Shares/Units will fully reflect the underlying net asset value, that Investors will be able to realise their shareholding or that any dividends will be paid. Investment in the Company should be viewed as a longer-term investment. Past performance is no guarantee of future results. A comprehensive list of risk factors is detailed in the Prospectus and Supplement and an investment should not be contemplated until all the risks are fully considered. The Prospectus and Supplement can be viewed at www.atlantichousefm.com or requested (+44 (0)20 3397 3156).
